

MCDONALD'S MENU NUTRITION AL ANALYSIS *

PROJECT OVERVIEW 🍔

Objective: Briefly state the project's goal, such as "Analyzing the nutritional content of McDonald's menu items to identify key insights and patterns."

Scope: Mention the scope, like the types of data analyzed (e.g., calorie count, fat content, etc.), and the overall approach (data collection, analysis, visualization)

DATA COLLECTION & PREPROCESSING 🍔

- **Data Source:** Explain where you got the data from (e.g., McDonald's website, public datasets).
- **Preprocessing Steps:** Highlight the key steps taken to clean and prepare the data (e.g., handling missing values, normalizing units, categorizing menu items).

ANALYSIS & VISUALIZATION

- Exploratory Data Analysis: Show some key findings or patterns you discovered (e.g., the average calorie content across different menu categories).
- Visualizations: Include sample charts or graphs (e.g., bar charts comparing calorie content, pie charts showing the distribution of fats, etc.).
- Insights: Highlight the most significant insights from your analysis.

CONCLUSION

- **Nutritional Imbalance** - The analysis highlights a nutritional imbalance, with many menu items being high in calories, fats, and sodium, while lacking essential nutrients like fiber and vitamins.
- **Health Risks**
- **Menu Variety**
- **Consumer Awareness**- The project underscores the importance of consumer awareness regarding nutritional content, suggesting that McDonald's could benefit from promoting healthier choices more prominently.
